To the members of the selection committee for the ESiWACE2 Summer School on Effective HPC

Request for Subsidy

Dear Sir or Madam,

I hereby address myself to you with the request to attain a subsidy for attending this year's Summer School on Effective HPC for Climate and Weather in Reading. As a Master's student and early career climate scientist I would not be able to participate in any other way. The limited resources of my third-party funded research group cannot support my attendance. My personal scholar grant is not sufficient to cover my visit either, it has to meet my study expenses instead.

At the Summer School I would like to gain professional experience in efficiently using HPC infrastructures both for my own research with climate models, and as a multiplier within and beyond our research group. In addition, I seek to open up future perspectives for a career in the climate sciences. Therefore, I ask you for your support.

Please refer to my motivational letter and CV for more detailed statements on how attending the Summer School could be of great significance for my current research projects and my co-workers.

In order to participate I would like to apply for a travel subsidy with estimated travel expenses of around 300£ in addition to the registration fee.

Please feel free to contact me, if you require any further information or recommendations.

Yours sincerely,

Moritz F. Adam
